Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
      printf("*");
    }
    else
    {
     for(int i=1; i<=n; i++)
     {
       for(int j=1; j<=n; j++)
       {
          printf("*");
          printf("*");
          break;
       }
     }
   }
 }
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int main()
{
    int n, count = 0;
    int i, j;

    scanf("%d", &n);

    count++;  // if condition

    if (n == 1)
    {
        count++;  // printf("*")
    }
    else
    {
        for (i = 1; i <= n; i++)
        {
            count++;  // outer for condition

            for (j = 1; j <= n; j++)
            {
                count++;  // inner for condition
                count++;  // printf("*")
                count++;  // printf("*")
                count++;  // break
                break;
```

```
            }
        }

        count++;  // final outer condition
    }

    printf("%d", count);

    return 0;
}
```

	Input	Expected	Got	
✔	2	12	12	✔
✔	1000	5002	5002	✔
✔	143	717	717	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
